2. Citations and explanations:

- 1 The present report makes reference to the following document:
D1: DE 197 08 741 A (DBT GMBH) 10 September 1998
(1998-09-10)
- 2 The document D1 cited by the applicant is considered to be the closest prior art. The subject matter of independent claim 1 differs from D1 in that:
the valve piston is provided with a second radial opening oriented towards the face and is shifted with respect to the first radial opening which is lockable by the control piston when an intermediate position between an initial position and an end position of the control piston is attained.
- 3 The subject matter of claim 1 is consequently novel (PCT Article 33(2)). The problem addressed by the present invention is consequently to produce a hydraulically switchable directional control valve which makes possible gentle operation and a rapid response characteristic.
